

STONE FLAKES™

Stone Flakes are a flat, acrylic flake product that may be mixed with a variety of materials such as clear or pigmented gel coat, polyurethane, or epoxy and sprayed directly onto the desired surface. Depending on the application, Stone Flakes may be backed with fiberglass or cast polymers.

The flat shape (5 mils thick) of the chip will cover a greater surface than conventional round chips and is often used in broadcast flooring applications where large surface areas need coverage. Since the build-up does not have to be as thick as round chips, Stone Flakes suspend well on vertical surfaces. In addition, Stone Flakes may be added to cast polymers in order to achieve a color highlight in granite-like mixes or to develop a unique granite effect. Looks great when combined with **Poly Chips®** or **Poly Stone™**.

Stone Flakes may be used in a variety of cast or spray applications including:

- Fiberglass pools/spas
- Broadcast flooring
- Tubs/showers
- Vanities behind gel coat
- Interior and exterior designs

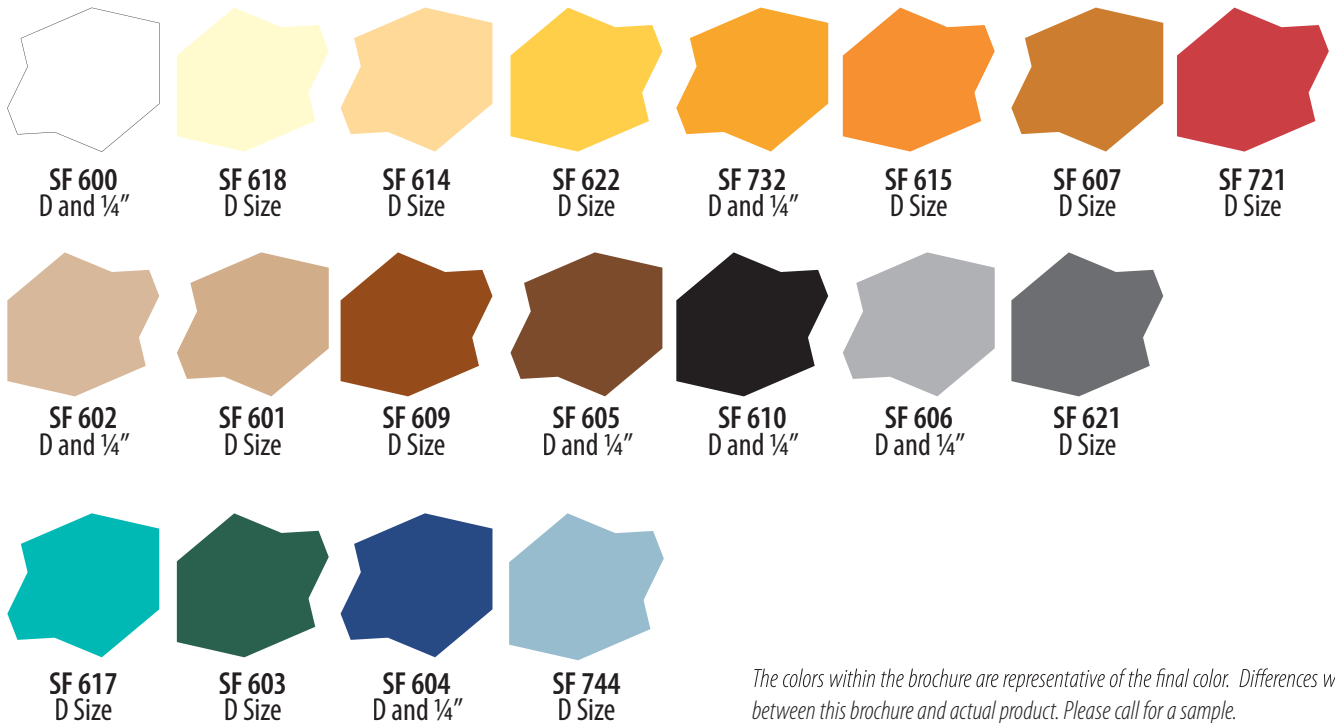

Pre-Blended Colors

Sizes Available

D Size refers to flakes that are 12–18 mesh. The ¼" flakes have a majority of ¼" sized flakes however, since the flakes are a relatively soft some product breakage will occur. The result is smaller sizes of flakes incorporated into the mix.

Solid Colors

The colors within the brochure are representative of the final color. Differences will occur between this brochure and actual product. Please call for a sample.
